

Project Part I: Visualisation

Required 1

Draw the map

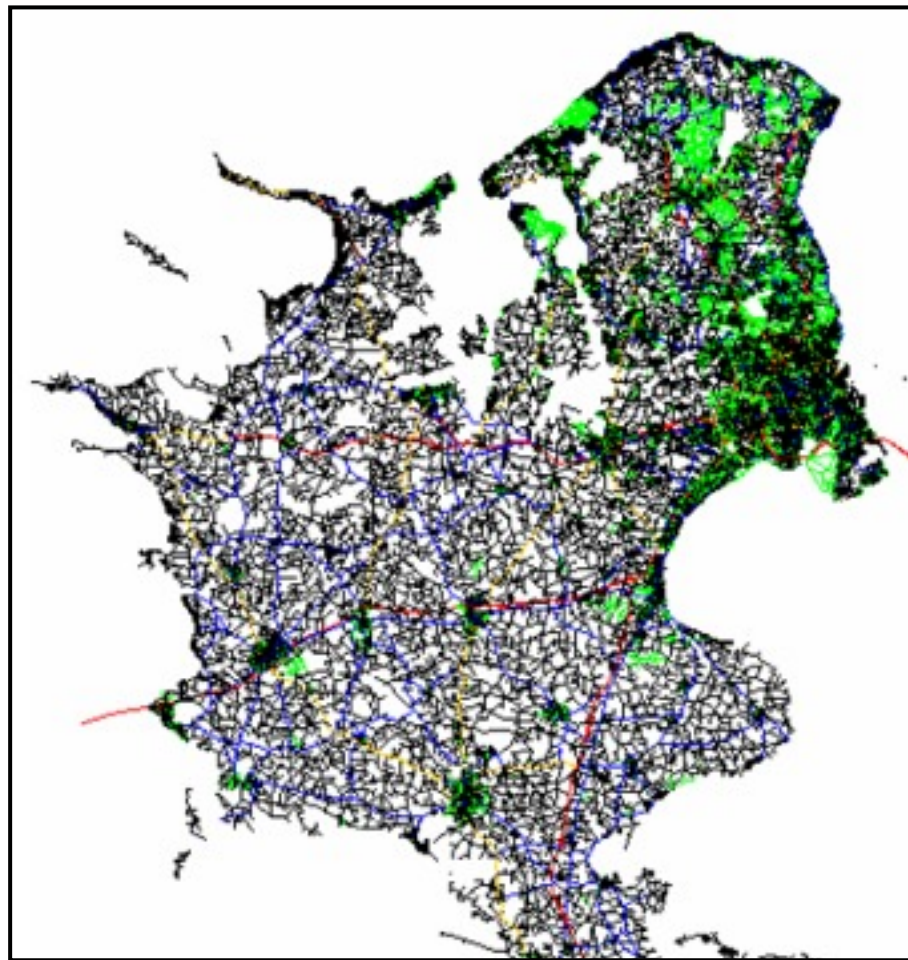

- Make an application that draws all the road segments in the dataset

Required 2

Differentiate between roads

- Draw different segment types with different colours, e.g.
 - Highways: **red**
 - Main roads: **blue**
 - Paths: **green**
 - Other: **black**

Required 3

Adjust size

It must be possible to adjust the size of the map drawing, i.e. when resizing the panel with the mouse or maximizing the window.

Required 4

Zoom in

- You must be able to focus on a specific area of the map by dragging a rectangle with the mouse.
- Zoom means that not all road segments are shown and that pixel coordinates change

Required 5

Display closest road name

- Either continuously or when a user **hovers** over the map, unobtrusively display the name of the road closest to the mouse, e.g., in a status bar.

Zoom out

- User must be able to zoom out e.g. by using the mouse wheel or by pressing the key 'O' or Ctrl+O etc.

Scrolling

- You should be able to scroll the map by using e.g. the arrow keys or the mouse

Display certain types of roads

- Add options so that user can decide to display only **certain kinds of roads**
e.g. Motorways, paths etc.
- Alternatively this can be that the user chooses transport medium and thus e.g.
 - **No paths** for cars
 - **No motorways** for bicycles

Draw coastline

- A coastline file from OpenStreetMaps, also containing regional boundaries, can be made available to you by the course manager or you can create your own at e.g. here http://www.ngdc.noaa.gov/mgg_coastline/
- (lon/lat format!)

Be creative! Add you own features! Make it better than Google Maps

Possible datasets:

1. Use Krak ASCII dataset (has accompanying Java loader)
2. Use OpenStreetMaps data (data only, no program sources)

Language:

You are encouraged, but not required to use Java.

Important dates

- **Wed. Apr. 2 2014 @ 2pm**
 - **Deadline for the source code and the reports**
- **Mon. Apr. 7 2014 10-16**
 - groups will present a 15' demo of their products
+5mins for questions

What to deliver

At the deadline

- Source code: .java files not .class files
- A report:
 - .pdf up to 12 pages
 - group constitution

Every Monday (apart from April 1):

- worksheets
- group diaries

ALL SUBMISSIONS IN LEARNIT!

One submission pr. group.

- **Use step-wise refinement:**
 - First analyze, design and implement a simple solution then make a more complicated solution
- **Define milestones e.g. 1-2 every week:**
 - Work on a specific required part of the project and then after milestones have been reached ,work with the extensions
- **Be ambitious**
 - You are lot of people with lots of time.
- **Remember Testing!**
 - Not required to hand in now but will be part of the final project

Questions, face to face meeting etc.

Office hours.

- **See learnit (calendar, top-left).**

Have fun!
